

mongod run in terminal.

connection with mongodb:

```
var myDB = 'mongodb://localhost/dbName';  
mongoose.connect(myDB);  
// create user that assigned to instance  
of database
```

→ Schema types:-

It handle definition of path defaults, validation, getters, setters, field selection defaults for queries.

Mongoose JS :-

→ npm install --save express mongoose body-parser :- to install node-modules.

→ first then set up server:-

```
var express = require('express');  
// var app = express(); // to instance of express  
// is app var that allow us to write  
server.  
var bodyParser = require('body-parser');  
// bodyParser allow us to grab element.  
var mongoose = require('mongoose');  
var port = 8080;  
app.listen(port, function() { // to start server  
  console.log('app listening on port ' + port);  
}); // now back fun to know server has  
started.
```
